Lianxiang Li

llxstupg@163.com | +86 175 1637 6491 | github.com/LI-PG1

Education

- **City University of Hong Kong** —MSc in Electronic Commerce (jointly offered by Dept. of Computer Science & Dept. of Information Systems), Fall 2026 – expected Oct 2027 / Feb 2028
- **Anhui University (Project 211)** —BSc in Applied Statistics, 2021 – 2025 | GPA 80/100

Experience

AI Development Engineer, VirtAItech (OrionX), Beijing Mar – Aug 2026

- Delivered 30+ open LLMs (text, VLM, MoE, OCR, image/video) to production inference services; owned vLLM configuration, environment adaptation, and acceptance evaluation.
- Built reusable RAG and agent frameworks (embedding + rerank over Milvus, tool-calling orchestration); fine-tuned domain models with LoRA/QLoRA and DeepSpeed.
- Multimodal customer service for CITIC Securities: speech transcription (SenseVoice), document/chart field extraction (Qwen2.5-VL), finance knowledge base (73% auto-resolution, ∼1.6s first response).

Selected Projects

Text2SQL Agent with Few-Shot Retrieval —Ctrip Data Platform Jul – Aug 2026

- Schema linking and few-shot selection over historical query–SQL pairs; 400+ case golden evaluation set (indicator-QA 91%, SQL execution 88%).

Multi-Tool Agent for Equipment Maintenance —SAIC Motor, POC Apr – Jun 2026

- Compared ReAct vs. Plan-then-Execute; MCP-style tool registration (7 tools); multi-step completion 74% → 86%.

Grounded RAG with Evidence Verification —Zhejiang Telecom 2026, during internship

- On-premise pipeline (4×A100); hybrid retrieval + cross-encoder rerank + LLM-as-Judge verification loop; top-5 hit rate +32%.

Research Interest

I am interested in Generative AI, LLMs, and agents. At work I built RAG and agent systems; I would now like to understand these models more deeply, not just deploy them.

I first read about DemoDiff while preparing this application, and the idea that a molecular design task could be defined by just a few demonstration examples surprised me. A small 0.7B model outperforming much larger ones on 33 molecular design tasks made me think there are still questions in this direction worth rethinking. In Text2SQL I picked few-shot examples by hand. Some worked well, some did not, and I could not say why at the time. That is exactly the kind of question I want to spend time on.

I majored in statistics (regression, multivariate analysis), so I feel at home with data and evaluation questions. DSAIL's work sits on both of those lines, which is why I would like to start as an RA and see whether I can grow into a researcher.

Skills

Python | PyTorch, Transformers, DeepSpeed, PEFT (LoRA/QLoRA) | vLLM, Docker, FastAPI | LangChain, LangGraph, RAG, agent orchestration | Milvus, Chroma, Redis | probability, regression, multivariate analysis | IELTS 6.5

教育背景

- **香港城市大学**—电子商务理学硕士（计算机科学系与信息系统系合办），2026 秋—预计 2027.10 / 2028.02 毕业
- **安徽大学（211）**—应用统计学学士，2021 —2025 | GPA 80/100

实习经历

大模型应用开发工程师，北京趋动科技（OrionX） 2026.03 – 2026.08

- 交付 30+ 个开源大模型（文本/VLM/MoE/OCR/图像与视频）至生产推理服务，负责 vLLM 配置、环境适配与上线评估。
- 搭建可复用 RAG 与 Agent 框架（Milvus 上的 Embedding+Rerank、工具调用编排），用 LoRA/QLoRA + DeepSpeed 微调垂域模型。
- 参与中信建投多模态客服：语音转写（SenseVoice）、证件/图表字段抽取（Qwen2.5-VL）、金融知识库（自动解决率 73%，首响约 1.6s）。

代表项目

Text2SQL 智能体 + Few-Shot 检索—携程数据中台 2026.07 – 2026.08

- 设计 schema linking 与历史 query–SQL 对 few-shot 检索；构建 400+ 条黄金评估集（指标问答 91%，SQL 执行 88%）。

设备运维多工具智能体—上汽集团，POC 2026.04 – 2026.06

- 对比 ReAct 与 Plan-then-Execute 编排；MCP 式工具注册（7 类工具）；多步任务完成率 74% → 86%。

带证据校验的落地 RAG —浙江电信 2026（实习期间）

- 私有化部署（4×A100）；混合检索 + cross-encoder 精排 + LLM-as-Judge 校验闭环；top-5 命中率 +32%。

研究兴趣

我对生成式 AI、大语言模型和智能体感兴趣。工作里搭建过 RAG 和智能体系统；随着落地项目的增多，我想更深入理解这些模型，而不只是落地它们。

准备申请时读到 DemoDiff，原来分子设计任务可以只用几个分子-分数示范例子来定义，模型看完示范就直接生成分子，这个想法有点出乎我意料。0.7B 的小模型能在 33 个分子设计任务上超过大得多的模型，说明这个方向还有不少问题值得重新想一遍。我在 Text2SQL 里手动挑过 few-shot 例子，有些管用，有些不行，当时也说不出为什么。这正是我想花时间弄明白的事。

我本科读的是统计，学过回归、多元分析，对数据和评估这类问题比较适应。DSAIL 的工作正好在数据和评估这两条线上，所以我想先从 RA 做起，看看自己能不能慢慢成长为研究者。

技能

Python | PyTorch、Transformers、DeepSpeed、PEFT（LoRA/QLoRA）| vLLM、Docker、FastAPI | LangChain、LangGraph、RAG、Agent 编排 | Milvus、Chroma、Redis | 概率论、回归、多元分析 | 雅思 6.5
